

ZNF268 抗原(重组蛋白)

中文名称: ZNF268 抗原(重组蛋白)

英文名称: ZNF268 Antigen (Recombinant Protein)

储 存: 冷冻(-20℃)

别 名: zinc finger protein 268; HZF3

相关类别: 抗原

概述

Fusion protein corresponding to C terminal 200 amino acids of human ZNF268 $\,$

技术规格

Full name:	zinc finger protein 268
Synonyms:	HZF3
Swissprot:	Q14587
Gene Accession:	BC110542
Purity:	>85%, as determined by Coomassie blue stained SDS-P AGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	Zinc-finger proteins contain DNA-binding domains and have a wide variety of functions, most of which encom pass some form of transcriptional activation or repressi on. The majority of zinc-finger proteins contain a kruep pel-type DNA binding domain and a KRAB domain, whi ch is thought to interact with KAP1, thereby recruiting

histone modifying proteins. Zinc finger protein 268 (ZN F268), also known as zinc finger protein 3 or HZF3, is a 947 amino acid protein belonging to the krueppel C2 H2-type zinc-finger protein family. ZNF268 contains 24 C2H2-type zinc fingers and one KRAB domain. Localize d to the nucleus, ZNF268 is involved in transcriptional regulation and is highly expressed in three to five wee k old embryos. ZNF268 has been implicated in human I eukemia, due to the identification of an alternatively sp liced form in leukemia patients. Two named isoforms of ZNF268 exist as a result of alternative splicing events.
